Date:

Wednesday Challenge Form

Group Members: Justin M. and Zachary F.

Problem Statement: Make a machine that can
Can tell if it's a dog or a cat without human
Interaction.

Approach: Justin came up with the idea that
Dogs lick water with their tongues backwards
And use the reversed tongue as a spoon, while
Cats catch the water in the grooves in their
Tongue.

Solution: a machine would relay if the water in
A bowl was licked backwards or forwards, telling
Us the answer

Lessons Learned: Always know the differences
Between cats and dogs.
